## **EXECUTIVE SUMMARY**

As part of the Thrust 3id12 and a tasking from the Air Forces, DRDC Toronto required testing to be conducted on a thermal manikin to evaluate the thermal performance of land and sea survival equipment. This report details the results of using the current flyer's coverall immersion suit with three (3) prototype thermal liners in still and turbulent water (30 cm wave). These results will be compared to values recorded from human subjects using the same wave height tested at the same test facility (wave tank).

## 1.0 INTRODUCTION

### 1.1 BACKGROUND:

As part of the Thrust 3id12 and a tasking from the Air Forces, DRDC Toronto requires testing to be conducted on a thermal manikin to evaluate the thermal performance of land and sea survival equipment. Parallel to the manikin testing, human testing will be performed using the same sea survival equipment and the same test facilities (wave tank).

### 1.2 AIM:

To measure the thermal performance of various land and sea survival equipment in still water and 30 cm wave conditions.

### 1.3 STATEMENT OF WORK:

The project will determine, utilizing a standardized, validated and reliable protocol (formally agreed upon between contractor and scientific authorities), the thermal performance in wind on various land and sea survival equipment. The details of the manikin test conditions are as follows:

1. Winter dressed (dry) in  $-30^{\circ}\text{C}$  sleeping bag with cold wind;
2. Winter dressed (dry) in proposed sleeping bag # 1 ( $-4^{\circ}\text{C}$ ) with cold wind;
3. Winter dressed (dry) in proposed sleeping bag # 2 ( $-10^{\circ}\text{C}$ ) with cold wind;
4. Winter dressed (dry) in current life raft with cold wind;
5. Winter dressed (dry) in proposed life raft with cold wind;
6. Winter dressed (dry) in  $-30^{\circ}\text{C}$  sleeping bag and life raft with cold wind;
7. Winter dressed (dry) in proposed sleeping bag # 1 ( $-4^{\circ}\text{C}$ ) and life raft with cold wind;
8. Winter dressed (dry) in proposed sleeping bag # 2 ( $-10^{\circ}\text{C}$ ) and life raft with cold wind;
9. Winter dressed (dry) in  $-30^{\circ}\text{C}$  sleeping bag and life raft over inflated life vest with cold wind;
10. Winter dressed (wet) in  $-30^{\circ}\text{C}$  sleeping bag with cold wind;
11. Winter dressed (wet) in proposed sleeping bag # 1 ( $-4^{\circ}\text{C}$ ) with cold wind;
12. Winter dressed (wet) in proposed sleeping bag # 2 ( $-10^{\circ}\text{C}$ ) with cold wind;
13. Winter dressed (wet) in current life raft with cold wind;
14. Winter dressed (wet) in proposed life raft with cold wind;
15. Winter dressed (wet) in  $-30^{\circ}\text{C}$  sleeping bag and life raft with cold wind;
16. Winter dressed (wet) in proposed sleeping bag # 1 ( $-4^{\circ}\text{C}$ ) and life raft with cold wind;
17. Winter dressed (wet) in proposed sleeping bag # 2 ( $-10^{\circ}\text{C}$ ) and life raft with cold wind;
18. Winter dressed (wet) in current life raft with cold wind in water;
19. Winter dressed (wet) in proposed life raft with cold wind in water;
20. Dressed with modified constant wear immersion suit with TQH Thinsulate liner dry, in water with waves;
21. Dressed with modified constant wear immersion suit with TQH Thinsulate liner wet (2 L of water added to the suit) in water with waves;
22. Dressed with modified constant wear immersion suit with FQH foam liner dry, in water with waves;
23. Dressed with modified constant wear immersion suit with FQH foam liner wet (2 L water), in water with waves;
24. Dressed with modified constant wear immersion suit with 2-piece winter liner dry, in water with waves;
25. Dressed with modified constant wear immersion suit with 2-piece winter liner wet (2 L water), in water with waves;
26. Dressed with modified constant wear immersion suit with TUQH Thinsulate liner dry, in still but circulated water;

### **1.3 STATEMENT OF WORK (Contd.):**

27. Dressed with modified constant wear immersion suit with FQH foam liner dry, in still but circulated water; and
28. Dressed with modified constant wear immersion suit with TQH Thinsulate liner dry, in still but circulated water.

DRDC Toronto will provide all the clothing and equipment required for the manikin tests. The contractor will make available the same test facilities used for the manikin testing for the human testing, i.e. wave pool and dressing area.

## 3.0 METHOD

### 3.1 *METHODOLOGY:*

The thermal performance of various land and sea survival equipment in wind was determined using a Thermal Instrumented Manikin Test System. During each test, environment, temperature, skin temperature and power consumption was recorded.

### 3.2 *THERMAL MANIKIN TEST SYSTEM:*

The Thermal Manikin Test System is a means for evaluating the thermal insulation of thermal protective clothing. In particular, this refers to survival suits for ocean emergencies and, in general, it refers to any human-use apparel. The system consists of a hollow aluminum manikin equipped with temperature sensors and electric heaters connected to a computer system.

In operation, the manikin is dressed in the human-use apparel to be tested and placed in an appropriate environment. The computing equipment then controls the heaters to maintain the skin of the manikin at a set temperature and measures the electrical power required to do so. This power is equivalent to the heat that escaped through the clothing due to the temperature difference across it. The power and temperature differences are then used, along with the known surface area of the manikin to calculate the thermal resistance offered by the apparel.

The system is designed for flexibility and ease of operation. To allow for different types of clothing, different sections of the manikin can be included or eliminated from the test as required. The basic philosophy on which the design is based is that the thermal performance of a garment can be evaluated by unmanned tests on the whole garment under conditions identical or similar to actual operating conditions. This philosophy dictates that the system employs a life-sized watertight manikin capable of being heated to and maintained at a selected temperature.

Figure 1 gives a total view of the system. The visible components are the Thermally Instrumented Manikin (TIM), the control module, the computer, the environmental temperature sensors and the cables connecting these components. Basically, the manikin provides a shape of human proportions to fit inside the test garment. The combinations of the aluminum shell of the manikin and the output of heaters inside it provide for an approximately uniform temperature over the manikin surface. This temperature is sensed by sensors embedded in the manikin's shell and passed to the control module. The control module houses the programmed data acquisition system, the heater relays and other circuit components. The data acquisition system receives data from the temperature sensors on the manikin and controls the heater relays so that the manikin surface temperature remains constant. It also measures the environment temperature and the power applied to the manikin and is programmed with the surface area of the manikin. With this temperature, power

### 3.2 THERMAL MANIKIN TEST SYSTEM (Contd.):

and area data, it calculates the insulation value of the garment and passes this, along with other pertinent data to the computer. The computer acts as a control and display terminal and post-processor.

FIGURE 1

## **4.0 TEST EQUIPMENT**

- 4.1 Control Module.  
Model #: Micro-Mac 5000. Serial #: 98-9109404-001.  
Last Calibration Date: March 31, 2003.  
Calibration Due Date: March 31, 2004.
  
- 4.2 Instrumented Manikin.  
Model #: TIM 1.  
Last Calibration Date: March 31, 2003.  
Calibration Due Date: March 31, 2004.
  
- 4.3 Desktop Computer.  
Model #: MID-MSI 2600 ATX.  
Calibration not required.

## 5.0 TEST CONDITIONS

5.1 Testing was conducted in water with an air and water temperature recorded at:

5.1.1 Ambient Air:	10.8 – 10.1		N/A
5.1.2 Water temperature:	9.98 – 9.63		12.36 – 12.93
5.1.2 Relative Humidity:	50.0 – 65.0 ± 5 %		65.0 – 75.0 ± 5 %

Despite the unintentional changes in the ambient air and water temperature, the conditions are not critical to the results rather it is the difference between the air/water temperature and body temperature, and that the latter was maintained constant across all conditions.

## 6.0 TEST ITEMS

- 6.1 Thermal Instrumented Manikin dressed in test garment, undergarment, and auxiliary component ensembles described in table 6.2.1, 6.3.1, and 6.4.1.
- 6.2 Table 6.2.1 illustrates the garments requested.
- 6.3 Table 6.3.1 illustrates the undergarments requested.
- 6.4 Table 6.4.1 illustrates the auxiliary components required for testing.

Run #	Garments
20 - 25	Modified constant wear immersion suit size 10
26 - 28	Modified constant wear immersion suit size 9

Table 6.2.1

Run #	Undergarments
20 - 25	2-piece long sleeve, legged cotton underwear
20 - 28	1 pair heavy weight wool socks
20, 21, 28	Liner number TQH Thinsulate size 9
22, 23, 27	Liner number FQH foam size 9
24, 25	2-piece winter liner size 9
26	Liner number TUQH Thinsulate size 9

Table 6.3.1

Run #	Auxiliary Components
20 - 28	LPSV life jacket inflated
	Neoprene hood
	1 pair of neoprene 3 finger mitts
20 - 25	1 pair of neoprene boots
20 - 28	Flotation positioning frame
26 - 28	1 pair leather flight boots

Table 6.4.1

## 7.0 TEST PROCEDURE

The land and sea survival equipment were tested using the procedures as directed in CORD Document No. R95-018 Implementation of Test Protocol of Thermal Manikin Test System May 1995. The manikin was lifted using an overhead hoist. The manikin was dressed in the above undergarment and garment ensembles and secured. Auxiliary components were added over the garments as described in Section 6.0 Test Items. The manikin was positioned into the prescribed test environments by lowering it into the water and positioned in the centre of the test tank in the natural flotation position. The environmental sensors were attached to the flotation frame to provide the environmental temperature. The still but circulated water test environment was achieved by using an attached submersible pump to the flotation frame. A wave generator consisting of a hydraulic ram connected to a paddle board located a one of the test tank provided a 30 cm wave with a wave period of 2.5 seconds environment for testing.

Entering all pertinent information into the system's computer started a warm up period, while all sections of the manikin were warming up to the selected skin temperature. During that time, the conditions for the prescribed tests were implemented. Once all sections of the manikin reached the set point, the test automatically commenced. The test duration was four (4) hours or until the manikin achieved steady state condition.

## 8.0 RESULTS

8.1 Table 8.1.1 illustrates final results of the thermal resistance testing rounded to four decimal points.

Run #	Description	Condition	Result CLO
20	Modified constant wear immersion suit, TQH Thinsulate liner, no leakage added	30 cm wave	0.6390
21	Modified constant wear immersion suit, TQH Thinsulate liner, 2 litres of leakage added to suit system	30 cm wave	0.3592
22	Modified constant wear immersion suit, FQH foam liner, no leakage added	30 cm wave	0.7777
23	Modified constant wear immersion suit, FQH foam liner, 2 litres of leakage added to the suit system	30 cm wave	0.5010
24	Modified constant wear immersion suit, 2-piece winter liner I, no leakage added	30 cm wave	0.9131
25	Modified constant wear immersion suit, 2-piece winter liner, 2 litres of leakage added to the suit system	30 cm wave	0.4047
26	Modified constant wear immersion suit, TUQH Thinsulate liner, no leakage added, no 2-piece long sleeved, legged cotton underwear, 300 grams accidental leakage in the suit system	Still water	0.5610
27	Modified constant wear immersion suit, FQH foam liner, no leakage added, no 2-piece long sleeved, legged cotton underwear, 300 grams accidental leakage in the suit system	Still water	0.6365
28	Modified constant wear immersion suit, TQH Thinsulate liner, no leakage added, no 2-piece long sleeved, legged cotton underwear, 400 grams accidental leakage in the suit system	Still water	0.5848

Table 8.1.1

8.2 Graph 8.2.1 illustrates the effects of leakage on the insulation values of each liner configurations

Graph 8.2.1

8.3 Graph 8.3.1 illustrates the percentage decrease in insulation values of each liner configurations.

 START TIME: 11:56:42  
 DESCRIPTION OF SUIT TESTED: MODIFIED CURRENT FLYER'S SUIT, NEOPRENE BOOTS, NEOPRENE HOOD/GLOVES, LPSV VEST.  
 UNDERGARMENTS: LINER NUMBER FQH FOAM SIZE 9, 2-PIECE LONG SLEEVE, LEGGED COTTON UNDERWEAR, HEAVY WEIGHT WOOL SOCKS.  
 ENVIRONMENT: 30 CM WAVE.  
 POSITION: NATURAL FLOTATION POSITION.  
 HUMIDITY: 60  
 ENV. FLOW SPEED:  
 DIRECTION:  
 CABLE LENGTH: Short (50ft)  
 ADDITIONAL INFORMATION: WRIST SEALS TAPED.  
 STOP TIME: 12:46:45                      MINUTES SINCE START OF TEST: 50.05  
 ENVIRONMENT TEMPERATURE:  
 INSTANTANEOUS: 9.74                      AVERAGE OVER TEST TIME: 9.74

 FILE NAME: c:\Program Files\timl\_1\_34beta\M0401SW1.TM1  
 DATE OF TEST: 01-08-2004  
 START TIME: 09:32:52  
 DESCRIPTION OF SUIT TESTED: MODIFIED CURRENT FLYER'S SUIT, LEATHER FLIGHT BOOTS, NEOPRENE HOOD/GLOVES.  
 UNDERGARMENTS: LINER NUMBER TUQH THINSULATE.  
 ENVIRONMENT: STIRRED WATER.  
 POSITION: NATURAL FLOTATION POSITION.  
 HUMIDITY: 65  
 ENV. FLOW SPEED:  
 DIRECTION:  
 CABLE LENGTH: Short (50ft)  
 ADDITIONAL INFORMATION: ACCIDENTAL LEAKAGE THROUGH WRIST SEALS = 300G  
 STOP TIME: 11:32:51 MINUTES SINCE START OF TEST: 120.00  
 ENVIRONMENT TEMPERATURE:  
 INSTANTANEOUS: 12.93 AVERAGE OVER TEST TIME: 12.93

#### 14. ABSTRACT

(U) As part of Thrust 3id12 and a tasking from the Air forces, DRDC Toronto required testing to be conducted on a thermal manikin to evaluate the thermal performance of land and sea survival equipment. this report details the results of using the current flyer's coverall immersion suit with three (3) prototype thermal liners in still and turbulent water (30 cm wave). these results will be compared to values recorded from human subjects using the same wave height tested at the same test facility (wave tank).

(U) Dans le cadre du vecteur 3id12 et d'une tâche assignée par les Forces aériennes, RDDC Toronto a exigé qu'on fasse des essais sur un mannequin thermique pour évaluer la performance thermique d'un équipement de survie terrestre et marin. Le présent rapport donne en détail les résultats du port d'une tenue d'hiver à l'état sec et au mouillé, dans un canot de sauvetage, courant et proposé, des sacs de couchage et des éléments auxiliaires, utilisant un lit de survie isolant simulé, fait de branches maîtresses d'épicéa. Ces résultats fourniront la base de tests menés sur des sujets humains utilisant le même équipement de survie marin et les mêmes installations d'essai (cuves à houle).
