CATEGORIES OF PUBLICATION

ORD Reports are the most authoritative and most carefully considered publications of the DGOR scientific community. They normally embody the results of major research activities or are significant works of lasting value or provide a comprehensive view on major defence research initiatives. ORD Reports are approved personally by DGOR, and are subject to peer review.

ORD Project Reports record the analysis and results of studies conducted for specific sponsors. This Category is the main vehicle to report completed research to the sponsors and may also describe a significant milestone in ongoing work. They are approved by DGOR and are subject to peer review. They are released initially to sponsors and may, with sponsor approval, be released to other agencies having an interest in the material.

Directorate Research Notes are issued by directorates. They are intended to outline, develop or document proposals, ideas, analysis or models which do not warrant more formal publication. They may record development work done in support of sponsored projects which could be applied elsewhere in the future. As such they help serve as the corporate scientific memory of the directorates.

ORD Journal Reprints provide readily available copies of articles published with DGOR approval, by OR researchers in learned journals, open technical publications, proceedings, etc.

ORD Contractor Reports document research done under contract of DGOR agencies by industrial concerns, universities, consultants, other government departments or agencies, etc. The scientific content is the responsibility of the originator but has been reviewed by the scientific authority for the contract and approved for release by DGOR.

MAY 1998

ABSTRACT

A model is presented which could be used to conduct risk analysis under the scenario planning framework being developed by the Directorate of Defence Analysis (DDA). DDA has presented a minimum set of 11 scenarios based on the commitments that have been described in the 1994 White Paper. They have developed a work program which over the next 12 months will expand these scenarios, identify the defence capabilities required to be successful in these scenarios, quantify these capabilities, and prioritize the Canadian Forces capability development to provide minimum risk at minimum cost. The following model is suggested as a potential method for quantifying the cost/risk relationship in a realistic manner to optimize the capabilities of the Canadian Forces.

**A MARGINAL ANALYSIS APPROACH TO RISK MANAGEMENT
UNDER THE SCENARIO PLANNING FRAMEWORK**

INTRODUCTION

1. The Directorate of Defence Analysis (DDA) has presented a framework for Force Development and Defence Planning based on 11 Scenarios drawn from the 1994 White Paper. These 11 Scenarios range from peacetime operations, to peace support operations, to multi-national war:
 - a. Scenario 1 - Search and Rescue in Canada;
 - b. Scenario 2 - Disaster Relief in Canada;
 - c. Scenario 3 - International Humanitarian Relief;
 - d. Scenario 4 - Surveillance of Canadian Territory and Approaches;
 - e. Scenario 5 - Evacuation of Canadians Overseas;
 - f. Scenario 6 - Peace Support Operations (Chapter 6);
 - g. Scenario 7 - Aid to the Civil Power;
 - h. Scenario 8 - National Sovereignty and Enforcement of Canadian Interests;
 - j. Scenario 9 - Peace Support Operations (Chapter 7);
 - k. Scenario 10 - Defence of Canadian and US Territory; and
 - m. Scenario 11 - Collective Defence.

These 11 Scenarios represent a minimum set of the Canadian Forces commitments as outlined by the 1994 White Paper and have been approved by the Defence Management Committee (DMC) as the framework under which Force Development and Defence Planning will be conducted in the future.

2. The following paper presents a mathematical model which could be used in conjunction with the Scenario Planning Framework to manage the risk/cost tradeoff.

OPERATIONAL DEMAND DATA

3. In an effort to predict the future, we can look at the likely frequency and duration of these 11 scenarios. This could be based on historical data for some scenarios or based on risk tolerance for more infrequent scenarios. The scenarios can also be prioritized which would suggest some level of concurrence could be tolerated. Table I presents hypothetical data on the frequency, duration and priority of the 11 Scenarios. In this case, we have two groupings "war" scenarios and "peace" scenarios. War preparations would take first priority and once tolerable levels of risk are achieved in these scenarios, we would consider investing in the peacetime scenarios. It should be noted that the capabilities acquired for war footing are also potentially beneficial in peacetime.

TABLE I
EXAMPLE OPERATIONAL DATA ON SCENARIOS

| Scenario Description | Expected Occurrences Per Year | Expected Duration of Scenario in Years | Priority |
|------------------------|-------------------------------------|---|----------|
| | | | |
| Search and Rescue | 5 | 0.02 | 2 |
| Disaster in Canada | 3 | 0.33 | 2 |
| Humanitarian Relief | 5 | 0.50 | 2 |
| Surveillance | 10 | 0.04 | 2 |
| Evacuation Overseas | 2 | 0.04 | 2 |
| Chapter 6 Operations | 3 | 1.00 | 2 |
| Aid to the Civil Power | 0.5 | 0.50 | 2 |
| Sovereignty | 1 | 0.25 | 2 |
| Chapter 7 Operations | 2 | 1.00 | 2 |
| Defence of Canada / US | 0.05 | 5.00 | 1 |
| Collective Defence | 0.1 | 5.00 | 1 |

CAPABILITY IDENTIFICATION

4. The first step in the process of conducting risk analysis is to identify the capabilities that are required in each of the scenarios. This can only be done when the scenarios are fully expanded using the Operational Estimate Process. This Estimate would be conducted with full input from the environmental commands and would result in a matrix with Scenarios across the columns and the capabilities down the rows filled with 'X's as shown in Table II. The requirement must be justified based on the desired effect expected from that capability and the specified success criteria for the scenario.

TABLE II
RESULTS OF THE CAPABILITY IDENTIFICATION PROCESS

| Cap | Scen 1 | Scen 2 | Scen 3 | Scen 4 | Scen 5 | Scen 6 | Scen 7 | Scen 8 | Scen 9 | Scen 10 | Scen 11 |
|-----|-----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|------------|------------|
| 1 | X | X | X | X | X | X | X | X | X | X | X |
| 2 | X | 0 | X | 0 | X | 0 | X | 0 | X | 0 | X |
| 3 | 0 | X | 0 | X | 0 | X | 0 | X | 0 | X | 0 |
| 4 | X | X | X | X | X | X | X | X | X | X | X |
| 5 | X | X | X | X | X | X | X | X | X | X | X |
| 6 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | X | X |
| 7 | X | X | X | X | X | X | X | X | X | X | X |
| 8 | X | X | X | X | X | X | X | X | X | X | X |
| 9 | X | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | X | X |
| 10 | 0 | X | 0 | 0 | 0 | 0 | 0 | 0 | 0 | X | X |

CAPABILITY QUANTIFICATION

5. The next obvious step is to quantify the requirement for each capability in each scenario. This quantification must be consistent across the scenarios and must be costed to allow optimization. Another factor that needs to be considered is the utilization rate of the capability. For example, strategic lift might be used at the beginning and the end of the scenario but be free to conduct other operations during the employment phase of the operation. Its utilization rate may be only 20%. Whereas, an infantry unit may need to be rotated every six months and therefore another unit must be prepared to replace them. Its utilization rate may be considered to be 200%. The utilization rate can be used as a multiplier on the demand to increase or decrease the requirement for each capability proportionally. Table III provides hypothetical data for the first 10 capabilities in the 50 capability data set used in the example run of the model.

TABLE III
EXAMPLE DATA ON CAPABILITY QUANTIFICATION

| Cap | Scen 1 | Scen 2 | Scen 3 | Scen 4 | Scen 5 | Scen 6 | Scen 7 | Scen 8 | Scen 9 | Scen 10 | Scen 11 |
|-----|--------|--------|--------|--------|--------|--------|--------|--------|--------|---------|---------|
| 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 |
| 2 | 1 | 0 | 1 | 0 | 1 | 0 | 1 | 0 | 1 | 0 | 1 |
| 3 | 0 | 1 | 0 | 1 | 0 | 1 | 0 | 1 | 0 | 1 | 0 |
| 4 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 |
| 5 | 11 | 10 | 9 | 8 | 7 | 6 | 5 | 4 | 3 | 2 | 1 |
| 6 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 1 | 1 |
| 7 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 | 1 |
| 8 | 1 | 2 | 3 | 1 | 2 | 3 | 1 | 2 | 3 | 1 | 2 |
| 9 | 1 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 1 | 1 |
| 10 | 0 | 1 | 0 | 0 | 0 | 0 | 0 | 0 | 0 | 1 | 1 |

RISK ANALYSIS

6. We can assume that the scenario expansion process based on the Operational Estimate will provide a good indication of the requirement for capabilities in each scenario to ensure a high probability of success. We will take these estimates as the expected requirements and assume that if the real demand overwhelms the capabilities this would result in operational failure. Therefore a reserve capability is required to compensate for unexpected demand. In our model, we assume Poisson demand for resources and exponential usage of capabilities. The model utilizes a reliability formulation to compute the risk of failure. That is, the model is a combination of series connections of capabilities with parallel redundancy through reserve forces which can be used to estimate the probability that demand may exceed resources. This allows us to apply marginal analysis to optimize the risk/cost relationship.

7. The model begins with a user-specified minimum set of capabilities and calculates the risk associated with this capability mix against the scenarios in the first priority set. Then the model calculates the capability that provides the "best bang for the buck" to add to the capability mix and recalculates the risk. The model continues to add capabilities

one at a time until the risk is reduced to a user-specified acceptable level for the first priority scenarios.

8. The next priority scenario set is then considered and the values of the capabilities that have been determined as a result of the first priority scenarios are used as a starting point for further calculations. Again, "bang for the buck" calculations are used to determine the next capability to invest in to reduce the risk. The calculations continue until the risk in the second priority scenarios is reduced to the user-specified level.

9. Further priority sets could be specified, however, the process is the same.

10. The model results can be presented graphically as shown in Figure 1. Notice that the left hand curve starts at a positive value of cost based on the user-specified minimum quantities of each capability. Then additional investment is required to begin reducing the risk. When the risk is reduced to 15%, a situation of diminishing returns sets in so that more and more investment is required to remove the last few percentages of risk. When the first priority scenarios are satisfied, the model can consider the second priority scenarios. The right hand curve represents the peacetime scenarios. The risk returns to a high level in this case because there is not a good match between the requirements for peacetime and wartime capabilities in our example data set. However, additional investment can reduce the risk to acceptable levels.

EXAMPLE COST/RISK RESULTS

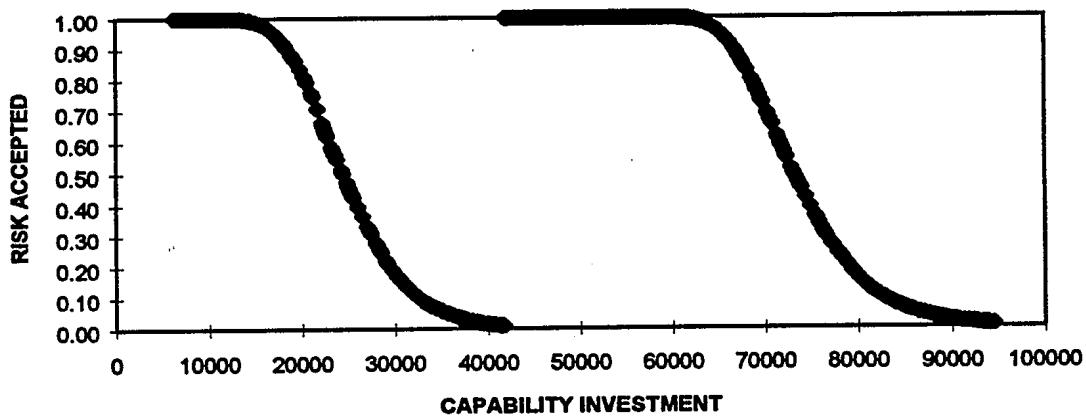

Figure 1: Example Results

11. It should be noted that each point on the curve is a mix of capabilities at optimal levels. That is, if you specify the acceptable risk, the model will calculate the minimum cost capability mix to meet that risk target. Similarly, you can work backward to determine the optimal capability mix and the associated risk that Senior Leadership would have to accept if an overall maximum investment level was specified. Furthermore, at any point along the curve, the capabilities are prioritized so that the analyst can determine in which area further investment would reduce the risk the most. Or alternatively, if reductions are required in the current budget, the areas where reduction would result in minimum incremental risk can be determined by the model.

12. It would be valuable to run the model from a zero-base, that is, with initial capability levels set to zero. Then allow the program to generate the optimal capability mix in terms of risk and investment and compare that with the current set of force capabilities. It may be quite possible that the current force capabilities is incurring more cost and requiring acceptance of more risk than necessary and through a long-term plan of investing in some capabilities and divesting others, the Canadian Forces could both save money and reduce risk at the same time (see Figure 2).

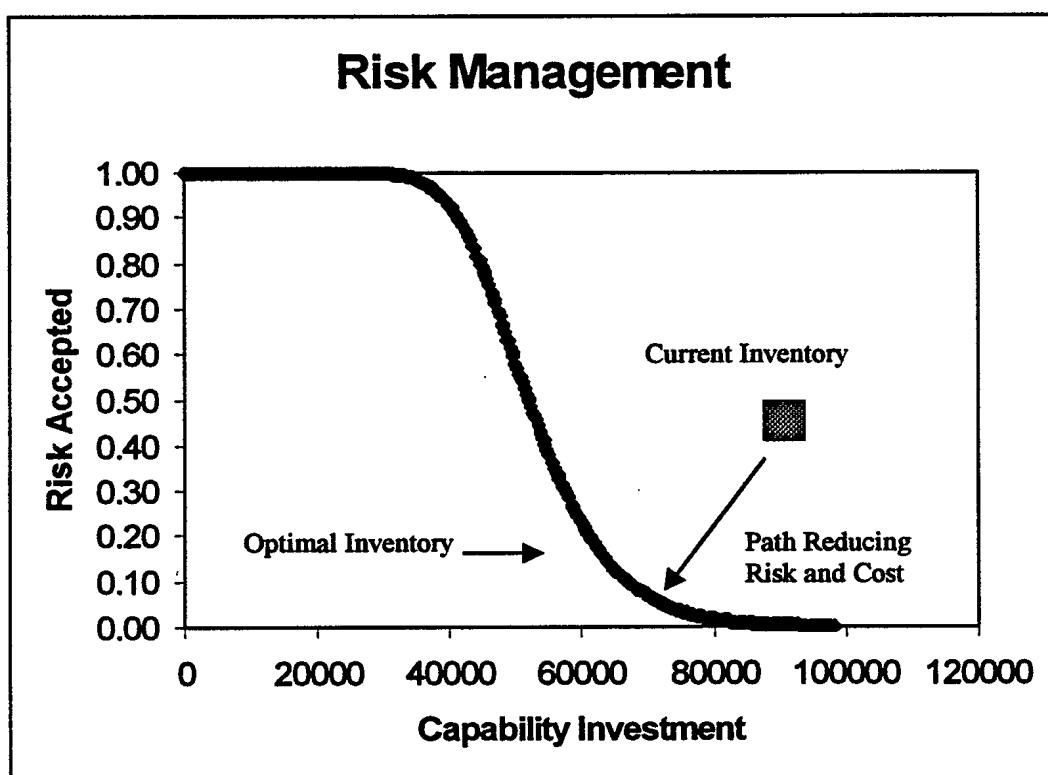

Figure 2: Risk Management

CONCLUDING REMARKS

13. As with any operational research model, the results are only as good as the input that is provided. The process of scenario expansion using the Operational Estimate, the capability identification and quantification will provide the data necessary to use this model to optimize the force capabilities to minimize cost and risk. This is the ultimate goal of the Scenario Based Planning Framework. In the end, we may find that "we get what we pay for" and to reduce risk to acceptable levels, the Canadian Forces may have to increase investment in some capabilities. However, the use of this type of model will ensure that the money allocated to Defence will be used to reduce risk as much as possible.

SECURITY CLASSIFICATION OF FORM
(highest classification of Title, Abstract, Keywords)

| DOCUMENT CONTROL DATA (Security classification of title, body of abstract and indexing annotation must be entered when the overall document is classified) | | |
|---|--|--|
| 1. ORIGINATOR (the name and address of the organization preparing the document. Organizations for whom the document was prepared e.g. Establishment Sponsoring a contractor's report, or tasking agency, are entered in Section 8). Operational Research Division Department of National Defence Ottawa, Ontario K1A 0K2 | 2. SECURITY CLASSIFICATION (overall security classification of the document, including special warning terms if applicable) UNCLASSIFIED | |
| 3. TITLE (the complete document title as indicated on the title page. Its classification should be indicated by the appropriate abbreviation (S, C or U) in parentheses after the title) A Marginal Analysis Approach to Risk Management Under the Scenario Planning Framework | | |
| 4. AUTHORS (last name, first name, middle initial) Taylor, Ivan W. | | |
| 5. DATE OF PUBLICATION (month Year of Publication of document) MAY 1998 | 6a. NO OF PAGES (total containing information. Include Annexes, Appendices, etc.) 41 | 6b. NO OF REFS (total cited in document) ----- |
| 7. DESCRIPTIVE NOTES (the category of document, e.g. technical report, technical note or memorandum. If appropriate, enter the type of report e.g. interim, progress, summary, annual or final. Give the inclusive dates when a specific reporting period is covered.) Research Note | | |
| 8. SPONSORING ACTIVITY (the name of the department project office or laboratory sponsoring the research and development. Include the address). DGSP/DDA | | |
| 9a. PROJECT OR GRANT NO. (if appropriate, the applicable research and development project or grant number under which the document was written. Please specify whether project or grant.) ----- | 9b. CONTRACT NO. (if appropriate, the applicable number under which the document was written.) ----- | |
| 10a. ORIGINATOR's document number (the official document number by which the document is identified by the originating activity. This number must be unique to this document.) DOR(J&L) Research Note RN 9814 | 10b. OTHER DOCUMENT NOS. (Any other numbers which may be assigned this document either by the originator or by the sponsor.) ----- | |
| 11. DOCUMENT AVAILABILITY (any limitations on further dissemination of the document, other than those imposed by security classification.) (<input checked="" type="checkbox"/>) Unlimited distribution (<input type="checkbox"/>) Distribution limited to defence departments and defence contractors; further distribution only as approved (<input type="checkbox"/>) Distribution limited to defence departments and Canadian defence contractors; further distribution only as approved (<input type="checkbox"/>) Distribution limited to government departments and agencies; further distribution only as approved (<input type="checkbox"/>) Distribution limited to defence departments; further distribution only as approved (<input type="checkbox"/>) Other (please specify): ----- | | |
| 12. DOCUMENT ANNOUNCEMENT (any limitation to the bibliographic announcement of this document. This will normally correspond to the Document Availability (11). However, where further distribution (beyond the audience specified in 11) is possible, a wider announcement audience may be selected.) ----- | | |

SECURITY CLASSIFICATION OF FORM

UNCLASSIFIED
SECURITY CLASSIFICATION OF FORM

13. ABSTRACT (a brief and factual summary of the document. It may also appear elsewhere in the body of the document itself. It is highly desirable that the abstract of classified documents be unclassified. Each paragraph of the abstract shall begin with an indication of the security classification of the information in the paragraph (unless the document itself is unclassified) represented as (S), (C), or (U). It is not necessary to include here abstracts in both official languages unless the test is bilingual).

A model is presented which could be used to conduct risk analysis under the scenario planning framework being developed by the Directorate of Defence Analysis (DDA). DDA has presented a minimum set of 11 scenarios based on the commitments that have been described in the 1994 White Paper. They have developed a work program which over the next 12 months will expand these scenarios, identify the defence capabilities required to be successful in these scenarios, quantify these capabilities, and prioritize the Canadian Forces capability development to provide minimum risk at minimum cost. The following model is suggested as a potential method for quantifying the cost/risk relationship in a realistic manner to optimize the capabilities of the Canadian Forces.

14. KEYWORDS, DESCRIPTORS or IDENTIFIERS (technically meaningful terms or short phrases that characterize a document and could be helpful in cataloguing the document. They should be selected so that no security classification is required. Identifiers, such as equipment model designation, trade name, military project code name, geographic location may also be included. If possible keywords should be selected from a published thesaurus, e.g. Thesaurus of Engineering and Scientific Terms (TEST) and that thesaurus-identified. If it is not possible to select indexing terms which are Unclassified, the classification of each should be indicated as with the title.)
